

Preparation Guideline for German Cockroaches

Absolute Pest Control Inc will be entering your home on _____ to treat for cockroaches.

To control the infestation of German Cockroaches we will be using Gel Bait Technology. By using this type of approach, we do not have to contaminate every crack and crevice of your kitchen and bathroom with insecticide, making it a less intrusive option but still highly effective. This will be less polluting for your living environment and less hazardous for you and your pets.

Before the application process can take place, please prepare your home prior to the technician's arrival by following the below steps:

- Please make sure that all dishes, utensils, and food products are put away in cupboards, drawers, and the fridge.
- Ensure that dirty dishes are not left in the sink overnight and countertops are cleaned.
- Pull out the fridge and stove and thoroughly clean in behind these appliances.
- Leave appliances pulled out and away from the wall until after the service is complete
- Do not use any insecticide aerosols before or after the application. Household cleaners can also act as a repellent for the cockroaches as well, so use with caution after the treatment.

You and your family do not have to leave your home during or after the application. If you follow the above steps, this will greatly speed up the control process and removal of cockroaches. If you find dead cockroaches that are found in the control area, you can vacuum them.

If you have any other questions or concerns, please contact us or your technician.

Thank you,
Absolute Pest Control
